Table 18-1

In 2007, the state Legislature enacted renewable energy standards, which require a certain percentage of energy provided by utilities to come from renewable sources. The new law also allows utility customers to charge higher rates to consumers and businesses to subsidize this effort. Please tell me which of the following comes closer to your own opinion when it comes to these standards.

Some people say that the renewable energy standards help to increase the development of solar, wind and other alternative energy sources.

Other people say that the renewable energy standards increase our electricity bills, put an unnecessary burden on business, and are essentially an energy tax.

Table 18-3

In 2007, the state Legislature enacted renewable energy standards, which require a certain percentage of energy provided by utilities to come from renewable sources. The new law also allows utility customers to charge higher rates to consumers and businesses to subsidize this effort. Please tell me which of the following comes closer to your own opinion when it comes to these standards.

Some people say that the renewable energy standards help to increase the development of solar, wind and other alternative energy sources.

Other people say that the renewable energy standards increase our electricity bills, put an unnecessary burden on business, and are essentially an energy tax.
