METHODOLOGY: The sample size for the survey is 612 likely voters in North Carolina and the margin of error is +/-3.96% at a 95% confidence interval, meaning that if this survey were repeated, results would not vary from the population by more than 3.96 percentage points 19 times out of 20. Responses were gathered via landline and cellphone interviews conducted using live operators at a professional call center. Demographics were adjusted to reflect the population from which the sample was drawn. The survey was conducted September 17– 20, 2020 by Harper Polling, a Cygnal company. The total percentages of responses may not equal 100% due to rounding.
